Notes

- 1. Electrical specification at 25℃.
- 2. Inductance tested at 100 kHz, 0.25Vrms.
- 3. Irms is the current that caused a approximate 40° C temperature rise from 25° C ambient.
- 4. Isat is the DC current at which inductance drop approximately 30% from its value without current.
- 5. The part temperature(ambient + temp.rise) should not exceed 125°C under worst case operating conditions. Circuit design, component placement, PWB trace size and thickness, airflow and other cooling provisions all affect the part temperature. Part temperature should be verified in the end appliction.
